Recipe Model Updates:

The only update I will be making to the models is to add the pic attribute to show an image with each recipe. As well as a default image if there is not a picture added.

Frontend Inspirations:

https://www.umami.recipes/

I like that this is available on desktop and mobile. It has a clean UI interface with a lot of white space. I like that you can categorize recipes by the meal. As well as it shows a picture and the name of the food right on the main page so you can see the food
